

CONSUMER GOODS
INDUSTRY

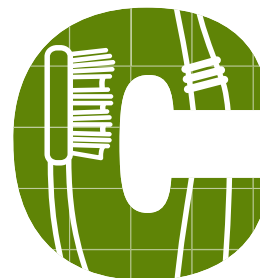

For error-free and reliable production:
Our assembly and automation solutions.

FLG
AUTOMATION

**Our fully automated systems ensure an efficient production:
around the clock and around the world.**

We have our own idea of customer proximity – understanding the mindset of our customers and being able to see things from their viewpoint.

These days, consumer good products are characterized by ever shorter product life cycles and development times and ever-increasing cost pressure. Keeping step with this trend are the ever growing demands on the deployed production systems and their cost-effectiveness. The development and implementation of complex production systems needs to keep up with product development in order to ensure adherence to the tight deadlines often faced prior to product launch. Expertise, experienced project teams and the ability as a supplier of automation systems to understand the mindset of customers are crucial to mutual success and the long-term survival of a company on today's markets.

We help our customers to achieve sustainable productivity gains.

As a competent system provider for handling, assembly and palletizing systems, we have been developing automation solutions for nationally and internationally active companies in the consumer goods industry since 1981.

We face each new challenge confident in the knowledge that we have vision, experience and expertise.

Our broad range of services range from the in-depth consultancy of our customers, over the development and design of high-quality assembly systems, through to their commissioning and inline support during production and series production startup. Training measures specially tailored to customer requirements and comprehensive services also form an integral part of our concept of customer proximity and customer satisfaction.

At FLG, we don't see individuality, high quality and mass production. as mutually exclusive – but a standard to which we aspire.

In order to meet this challenge and enjoy market success, manufacturers of consumer goods need strong partners in the automation technology industry. We support production processes for the mass market with automation and system solutions that ensure efficient series production.

It goes without saying that we also offer gentle and fault-free handling of products combined with high plant efficiency and high availability.

The targeted use and coordination of high-quality components and technologies, and the careful selection of suppliers, guarantee optimum and high-quality results. The open architecture of our turnkey systems also allows integration of additional processing and assembly technologies. As the system provider, we don't just oversee the relevant part of the process, but take responsibility for the entire project.

Technologies and procedures

Handling

- Palletizing
- Feeding
- Packaging
- Blister packaging
- Separating
- Magazining
- Transporting

Testing

- Leak testing
- Image processing
- Function testing
- Test data capturing
- Force-examination
- Image processing

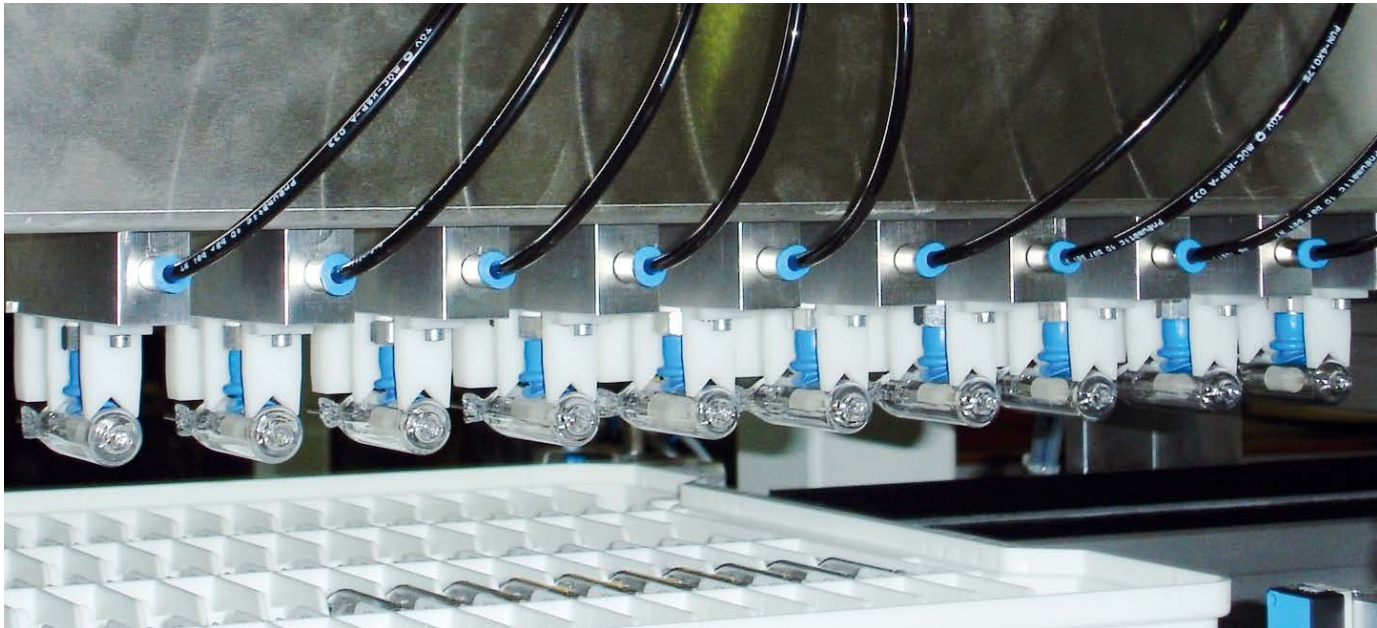

Joining

- Screwing
- Bonding
- Ultrasonic welding
- Laserwelding

Identifying

- Labeling
- Stamping
- Marking
- Dosing
- Lasermarking

WE SUPPORT YOUR PRODUCTION PROCESSES FOR AN EFFICIENT MASS PRODUCTION – COMPETENT, SAFE AND SUCCESSFUL.

We are fascinated by new challenges.

We look at the big picture and monitor key trends.

Long-term customer satisfaction and customer loyalty are important to us.

Our decades of international experience in the automation technology industry and our all-round expertise help us to achieve these goals. Our across-the-board industrial experience allows us to think outside the box and generate additional know-how; paired with an outstanding technology and supplier portfolio, this creates the ideal basis for efficient production technology for our customers.
